

AQUACER 528

Emulsion based on an ethylene-acrylic acid-copolymer wax for improving the surface properties of aqueous care products. Strong anti-slip effect and good foot traffic resistance.

Product Data

Composition

Non-ionic emulsion of an ethylene-acrylic acid-copolymer wax

Typical Properties

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

Non-volatile matter:	35 %
Carrier:	Water
Melting point (wax content):	221 °F
Viscosity (68 °F):	< 500 mPa·s
pH value (68 °F):	9.5

Food Contact Legal Status

For the current food contact legal status, please contact our product safety department or visit www.byk.com for further information.

Storage and Transportation

Temperature sensitive. To be stored and transported between 5 °C / 41 °F and 35 °C / 95 °F.
Vor Verarbeitung umrühren.

Applications

Care Products and Polishes

Special Features and Benefits

AQUACER 528 is compatible with all known polymer dispersions, resin solutions, plasticizers, film building agents and surfactants. The wax emulsion gives a strong anti-slip effect and is characterized by a good dirt-repellent effect.

The above-mentioned properties are generated by mixing AQUACER 528 with polymers in a ratio of 3:1 (solid wax to solid polymer). Mixing at a ratio of 1:6 increases the water and alcohol resistance, abrasion resistance (scuff resistance) and the protection against heel marking (foot traffic resistance).

Recommended Use

AQUACER 528 is used in self-shine floor care products for flooring of all kinds.

Recommended Levels

7-15 % additive (as supplied) based upon total formulation.

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

Incorporation and Processing Instructions

The wax additive is preferably added under agitation after mixing the polymers with the plasticizers and water, but before incorporating surface-active substances.
