

Data Sheet Issue 10/2012

# **DISPERBYK-168**

Wetting and dispersing additive for solvent-borne and solvent-free radiation-curable coatings, printing inks and adhesives.

## **Product Data**

Composition Aromatic-free

Solution of a high molecular weight block copolymer with pigment affinic groups

# **Typical Properties**

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

Amine value: 10.5 mg KOH/g Density (68 °F): 9.18 lbs/US gal

Non-volatile matter (20 min., 302 °F): 30 %

Solvents: Dicarboxylic acid ester

Flash point: 212 °F

#### **Food Contact Legal Status**

For the current food contact legal status, please contact our product safety department or visit www.byk.com for further information.

#### **Storage and Transportation**

Mix well before use. Separation or turbidity may occur at temperatures below 5  $^{\circ}$ C (41  $^{\circ}$ F). Warm to 20  $^{\circ}$ C (68  $^{\circ}$ F) and mix well.

# **Special Note**

The treatment of some organic pigments can negatively influence the effectiveness of the additive. In these cases, tests with the untreated pigment of the same type may be successful.

# **Applications**

# **Coatings Industry**

## **Special Features and Benefits**

The additive deflocculates the pigments and stabilizes them by means of steric hindrance. It provides equal electrical charge to the pigment particles. The resulting repulsion and the steric stabilization prevent a possible co-flocculation, which leads to flood and float-free color in pigment mixtures. The deflocculating properties of the additive increase gloss, color strengh, transparency, and hiding power and reduce the viscosity of the millbase.

#### **Recommended Use**

The additive is recommended for radiation-curable industrial coatings, can coatings and coil coatings.

#### **DISPERBYK-168**

Data Sheet Issue 10/2012

#### **Recommended Levels**

Amount of additive (as supplied) based upon pigment:

Inorganic pigments: 10-15 %
Titanium dioxides: 5-6 %
Organic pigments: 30-90 %
Carbon blacks: 70-140 %

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

# **Incorporation and Processing Instructions**

For optimum performance, the additive must be incorporated into the millbase before addition of pigments. The resin and solvent components of the millbase are pre-mixed and then the additive is slowly incorporated while stirring continuously. Do not add the pigments until the additive has been fully distributed.

## **Printing Inks**

# **Special Features and Benefits**

The additive deflocculates the pigments and stabilizes them by means of steric hindrance. It provides equal electrical charge to the pigment particles. The resulting repulsion and the steric stabilization prevent a possible co-flocculation, which leads to flood and float-free color in pigment mixtures. The deflocculating properties of the additive increase gloss, color strengh, transparency, and hiding power and reduce the viscosity of the millbase.

#### **Recommended Use**

The additive is particularly recommended for UV-curable flexo and offset printing inks. It increases gloss and transparency. DISPERBYK-168 reduces the dispersion time, lowers viscosity and increases color strength.

# **Recommended Levels**

Amount of additive (as supplied) based upon pigment:

Titanium dioxides: 2.5-5 % Organic pigments, Carbon blacks: 10-20 %

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

# **Incorporation and Processing Instructions**

For optimum performance, the additive must be incorporated into the millbase before addition of pigments. The resin and solvent components of the millbase are pre-mixed and then the additive is slowly incorporated while stirring continuously. Do not add the pigments until the additive has been fully distributed.

## **Adhesives**

# **Special Features and Benefits**

The additive deflocculates the pigments and stabilizes them by means of steric hindrance, which leads to a reduction in viscosity and higher transparency. DISPERBYK-168 reduces the dispersion time.

#### **Recommended Use**

DISPERBYK-168 is recommended for stabilizing titanium dioxide, organic pigments and carbon blacks in radiation-curable adhesive systems.

#### **Recommended Levels**

Amount of additive (as supplied) based upon pigment:

Titanium dioxides: 2.5-5 % Organic pigments, Carbon blacks: 10-20 %

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests.

# **Incorporation and Processing Instructions**

For optimum performance, the additive must be incorporated into the millbase before addition of pigments. The resin and solvent components of the millbase are pre-mixed and then the additive is slowly incorporated while stirring continuously. Do not add the pigments until the additive has been fully distributed..
