

Data Sheet Issue 08/2013

# **AQUACER 539**

Paraffin wax emulsion for improved surface characteristics in aqueous coatings and printing inks.

# **Product Data**

### Composition

Non-ionic emulsion of modified paraffin wax

### **Typical Properties**

The values indicated in this data sheet describe typical properties and do not constitute specification limits.

Non-volatile matter: 35 %
Carrier: Water
Melting point (wax content): 194 °F
Viscosity (73 °F, D=400/s): 35 mPa·s
pH value: 9.5

### **Food Contact Legal Status**

For the current food contact legal status, please contact our product safety department or visit www.byk.com for further information.

### **Storage and Transportation**

Temperature sensitive. To be stored and transported between 5  $^{\circ}$ C (41  $^{\circ}$ F) and 35  $^{\circ}$ C (95  $^{\circ}$ F). Mix well before use.

## **Special Note**

Intercoat adhesion must be verified in multi-layer systems.

# **Applications**

# **Coatings and Printing Inks**

### **Special Features and Benefits**

The additive has a hydrophobic effect and improves antiblocking. It increases surface slip, scratch resistance, abrasion resistance and provides a soft feel effect.

### **AQUACER 539**

Data Sheet Issue 08/2013

### **Recommended Use**

Architectural coatings	
Wood and furniture coatings	
Printing inks and overprint varnishes	
Leather coatings	

especially recommended recommended

### **Recommended Levels**

1-3 % additive (as supplied) based on the total formulation – in exceptional cases up to 4 %.

The above recommended levels can be used for orientation. Optimal levels are determined through a series of laboratory tests. Recoatability and intercoat adhesion is to be verified in multi-layer systems, particularly if high dosages are used.

# **Incorporation and Processing Instructions**

The additive should preferably be incorporated into the coating at the end of the production process at a low shear rate. Mix well before use.
